

TREE CARE PRODUCTS FROM CARBON GOLD

Carbon Golds biochar-based Tree Care products increase survival rates and significantly improve tree health.

Formulated and trialled at Bartlett Tree Research Laboratories at the University of Reading UK (ORETO) these enriched biochar products are proven to significantly reduce losses, minimise maintenance costs and improve the health of transplanted and established trees. Ideal for stabilising soil moisture and increasing fertility of dry, sandy soils, enriched biochar produces healthier, more vigorous plants that are

better equipped to survive harsh climates, poor soil and intermittent water supplies.

- » Quicker establishment and root growth
- » Delivers increased nutrient & microbial populations
- » Improves vitality and retains moisture

Allowing trees to grow healthy root systems for planting in the harshest conditions.

Areas of use

Soft Landscape areas

- » Improve existing soil at planting (in all soil types, especially dry and sandy)
- » Add as a surface mulch around existing planting or combine with existing mulches or fertilisers
- » To keep moisture and nutrients at root level in sandy soils
- » To assist with aeration and drainage
- » To boost soil biology in all soils – especially after ground works on construction sites.

Pre or post planting shrubs and semi mature trees

- » When planting into soils affected by soil borne fungal and bacterial infections
- » When transplanting or moving trees, shrubs, hedging, root stock to aid establishment
- » In urban and roadside environments to help defend against salt decay and stress in trees

Tree Soil Improver

Ideal for new and transplanted trees, shrubs, bare root stock and landscape planting to reduce transplant shock and promote vigorous growth. Biochar enriched with mycorrhizal fungi, seaweed and wormcasts.

Tree Fertiliser

Ideal for established trees, shrubs, bare root stock and landscape planting, or those growing in infected soils. Soluble biochar pellets enriched with potassium phosphite, mycorrhizal fungi, seaweed and wormcasts.
