

Biochar Compost Rejuvenator

Rejuvenate your compost instead of replacing it, saving you time and money.

Carbon Gold's Compost Rejuvenator is a combination of our Biology Blend and All Purpose Compost, without the substrate, and has been designed to 'add back' key nutrients and fertiliser to 'spent' compost, reducing the need to buy new compost every year.

This product enables compost to be recycled and reused for up to five years if no disease is present and delivers great results.

How to use

Mix in with used compost, water well and it's ready to use. It really is that simple!

- » A single 1L tub of this amazing product is enough to revitalise existing compost in 7 average sized hanging baskets
- » One 4L box is enough to invigorate 280L of used compost – that's 7 of our 40L bags, or the equivalent to a raised bed which is 1m x 1m x 0.25

Add to a plain substrate like coir, bark or even your own compost to ensure that it has all the relevant natural biology.
