

# Biochar All Purpose Compost

100%  
Peat  
free

Our Biochar All Purpose Compost is entirely free from peat and synthetic chemical additives, making it a natural and eco-friendly solution for your gardening needs.

With Soil Association approval for organic growing, you can trust in the organic excellence of our product. Enriched with essential minerals, trace elements, beneficial bacteria, and fungi, our biochar-infused compost provides the perfect environment for strong root development and flourishing plants.

Using our coir-based compost in your garden and pots is a great choice because coir, which is derived from coconut husks, is an eco-friendly and sustainable alternative to peat-based compost.

## How to use

**Planters or hanging baskets:** Use straight out of the bag - this organic compost is pre-enriched with everything that you need to get plants off to a cracking start.

**To improve soil structure:** Loosen the soil using a fork or tiller to a depth of 25-30cm. Mix in the compost, using about 20-30% by volume.

**Mulching:** As a mulch, our compost can help retain moisture, suppress weeds and regulate soil temperature. Spread a 5cm layer around the base of plants, leaving a gap around the stems to prevent rot.

**Watering:** Both biochar and coir have an innate ability to retain water, so be mindful not to over water your plants.
