

Biochar Fertiliser

Carbon Gold Biochar Fertiliser pellets offer superb results with no chemical or GM additives. Ideal as a flower fertiliser as well as growing vegetables, fruit, roses, shrubs, trees, and plants, giving them a natural boost.

This plant derived organic fertiliser includes biochar and offers superb results with no synthetic or GM additives. It also improves soil microbes and include balanced crop nutrients. It is a 5-5-5-NPK based vegetable fertiliser with added enriched biochar.

- » Nitrogen (5N) for active leaf and stem growth
- » Phosphorus (5P) for strong, healthy root systems
- » Potassium (5K) promotes vigorous flowers and fruit development.

All Carbon Gold products are made from enriched biochar which includes mycorrhizal fungi, trace minerals and beneficial bacteria to help promote root development and vigorous healthy plants.

How to use

Typically, for garden vegetables or flowers, you can apply one to two handfuls (approx. 60 grams) of pellets per m² of soil.

Gently scatter the pellets evenly around the base of your plants, and lightly dig in. Take care not to let them touch the plant stems.

Water the area thoroughly after application to help the pellets dissolve and release nutrients into the soil.
